PROFESSIONAL SUMMARY

Informatics graduate specializing in full-stack web development and applied AI engineering. Experienced in building web applications with Laravel, Spring Boot, React, and Angular, and AI-powered systems using LangGraph and large language models. Developed a YOLOv8 computer vision pipeline for Braille translation as a final thesis project, achieving 98.1% mAP detection accuracy.

TECHNICAL SKILLS

Backend & Frameworks: Laravel, Spring Boot, REST API, JWT Authentication
Frontend: React, Angular, Tailwind CSS, HTML, CSS
Programming Languages: Java, Python, JavaScript, TypeScript, SQL
AI & Machine Learning: LangGraph, Large Language Models (LLMs), YOLOv8, Computer Vision
Database: PostgreSQL
Cloud & Tools: Google Cloud Platform (Compute Engine, Cloud Storage, IAM), Git, Postman

EDUCATION

Universitas Pembangunan Nasional Veteran Yogyakarta — Sleman, Indonesia Aug 2021 – Oct 2025
Bachelor of Informatics | GPA: 3.52 / 4.00

PROFESSIONAL EXPERIENCE

Bangkit Academy by Google, GoTo, Traveloka — Jakarta, Indonesia Feb 2024 – Jun 2024
Cloud Computing Cohort

- Completed the Cloud Computing learning path, covering GCP architecture, networking, databases, and application deployment.
- Contributed backend service development and cloud deployment for the BEYOND capstone project as part of a multidisciplinary team.
- Configured cloud infrastructure — Compute Engine, Cloud Storage, IAM, and database services — applying best practices for scalability, security, and resource management.

PROJECTS

AI Smart Travel Planner — GitHub Jul 2026
Personal Project

- Developed an AI-powered travel planner using LangGraph and LLMs to generate personalized travel itineraries.
- Integrated travel-related APIs and built a conversational interface with a Laravel backend.

VentureForge AI — GitHub Jul 2026
Personal Project

- Developed an AI-powered platform for business idea validation using LangGraph and LLMs to generate structured analysis and feedback.
- Built a responsive web application with Laravel to deliver AI-driven business analysis features.

Event Ticketing System — Live Demo Jun 2026
Personal Project

- Built a full-stack event ticketing platform with Admin, Organizer, and User roles using Laravel, Spring Boot, Angular, and PostgreSQL.
- Implemented RESTful APIs, JWT authentication, and role-based access control for secure event and ticket management.

Handwritten Braille Translation (YOLOv8) — GitHub Oct 2025
Final Thesis

- Trained and optimized a YOLOv8 model to detect and classify 28 Braille character classes from image inputs, achieving 98.1% mAP detection accuracy.
- Built a computer vision pipeline in Python to translate handwritten Braille into text, integrating Peter Norvig's spelling correction algorithm to improve output readability by 90.5%.

ORGANIZATIONAL EXPERIENCE

Information Technology Club (ITC) — Sleman, Indonesia 2022 – 2023
Frontend Web Developer

- Developed responsive web interfaces and reusable frontend components using React and Tailwind CSS, translating UI/UX designs into production-ready code.
- Coordinated development tasks with team members to support on-time delivery of organizational web projects.
